Apple's Electric Car

Apple´s promising entry into the global market for cars **resurfaced** just recently after being quiet since the development first began sometime in 2015.

Apple has kept its plans for coming up on an **autonomous vehicle** in secrecy, given with the project´s potential to **overturn** the market, and similar to how Apple´s iPhones have changed the consumer-electronics industry. Nevertheless, Apple probably should need to partner with a car manufacturer because to build a car plant would **tremendously** cost billions of dollars and will take many years to complete. There are two Korean automakers, Hyundai and Kia, have answered to intense **speculation** about the **impending** new product by Apple. Both of the companies confirmed that they weren´t in dialogues with Apple to develop the said autonomous vehicle.

The sales of electric vehicles are **flourishing** in Europe, reaching a record high in 2020. According to forecasts, by 2050, around 65% of all passenger-vehicle kilometers traveled will be electric, and there will be around 800 million electric vehicles out of a total 1.5 billion.

Difficult words:

resurfaced (to appear again),

autonomous vehicle (a self-driving car),

overturn (to upturn, inversion)

tremendously – (greatly, extremely)

speculation – **(**rumor, gossip or hearsay)

impending – (potential, possible)

flourishing – (becoming popular, successful
